HEPATITIS

DAY 28TH JULY

Tired? At Risk? Could it be Hep C?

Most people with Hepatitis C aren't aware they are infected.

Consider a simple blood test to screen for Hep C exposure; most labs will automatically check for active virus if serology HCV-Ab positive for exposure.

Check: Have you offered treatment to all your patients with known Hepatitis C ?

Treatment is free and effective, and can be prescribed in primary practice.

Refer to HealthPathways for details, and contact the Te Manawa Taki Community Hep C Team if you would like support finding or managing your HepC patients:

Email midlandhepc@waikatodhb.health.nz or Phone **0800 195 115**
