

REMINDER TO MEDTECH PRACTICES ACTIVATING NZePS

When a Medtech site has completed their activation it is very important that the Medtech SERVICES are re-started on the server machine to ensure NZePS prescriptions will successfully reach the NZePS broker and be available for pharmacies to download.

For **Medtech32 sites the Medtech Services** will need to be stopped and re-started. For **Medtech Evolution sites the Medtech Shell Services** will need to be stopped and re-started.

On completion of this, each site should create a "dummy script" and check the status of the script has updated to **"Active"**. The "Active" status indicates the ePrescription has successfully reached NZePS. The status should **NOT** show **'To Be Sent'**.

Steps are shown on the following pages.

Note: This must be done on the Server machine in the practice. Select Start and type Services in the field below – double click on Services (shown next to arrow below)

The screenshot shows the MedTech-32 Ministry of Health application interface. At the top, the patient information for SEVENTEEN Lucy (130344.1) is displayed, including her address, date of birth (10 May 1988), gender (Female), and other identifiers. The main area is divided into several panels: Patient Medications, New Consultation, and a calendar view for June 2019. A Windows Start menu search window is overlaid on the bottom left, showing search results for 'services'. The 'services' entry is highlighted, and a red arrow points to it. Another red arrow points to the Start button on the taskbar. The search bar contains the text 'services' and is circled in red.

Rep	Date	Drug Name	Qty	Directions	Amount	Prov	Classifica
<input type="checkbox"/>	13 Jun 2019	Salbutamol 100 Microgram/Actuation Inhalation	2	9 actuation, As Required	14.06	SFE	
<input type="checkbox"/>	13 Jun 2019	Paracetamol 120 Mg/5 MI Oral Liquid	200	5 mL, Every Four Hours	1979.50	SFE	
<input type="checkbox"/>	12 Jun 2019	Alendronic Acid 40 Mg Tablet	30	1 tablet, Once Daily	7381.50	SFE
