

## BPAC BPI Cervical Screening

The cervical screening BPI report has been extended to include:

- HPV as well as cytology (smear) tests – whether or not they have been screened on time
- Whether the patient has no recall or a past recall (>90 days)
- Whether the patient has a recall today or in the future for cervical screening
- 'Declined' has been included in 'Not Screened'

As previously:

- High needs and total population results are presented
- A report at practice level will have drill down capability via clicking numbers under 'Screened', 'Not Screened' and 'Declined' that produces a list of patients and statuses
